

Netflix Movies & TV Shows Analysis Using SQL

 Author

VIPUL KUMAR SINGH

1. Introduction

With the rapid growth of streaming platforms, Netflix has become one of the leading providers of digital entertainment worldwide. This project focuses on analyzing Netflix's Movies and TV Shows dataset using SQL to extract meaningful insights and trends.

2. Objective

The main objectives of this project are:

- To analyze the distribution of Movies and TV Shows
 - To identify top contributing countries
 - To explore content trends over the years
 - To find the most common genres on Netflix
 - To perform data cleaning and transformation using SQL
-

3. Dataset Information

- **Source:** Kaggle (Netflix Movies and TV Shows Dataset)

netflix_titles.csv

- **Total Records:** 8,800+
 - **Columns:** Title, Director, Cast, Country, Date Added, Release Year, Rating, Duration, Genre, Description
-

4. SQL Analysis

QUERIES:

MYSQL.PROJ.sql

OUTPUT:

SQLProjOutput.pdf

5. Key Insights

- **Content Mix:** Movies dominate over TV Shows.
- **Recent Growth:** Significant increase in content after 2020.
- **Top Countries:** Majority content from US, India, and UK.
- **Ratings:** Most content is **TV-MA** and **TV-14** → targets mature audience.
- **Long Movies:** Many titles exceed 120 mins → focus on premium, cinematic content.
- **Top Directors:** Few directors contribute a large share of titles.
- **Missing Data:** Some content lacks director info → data quality gap.
- **Genres:** Drama and International content are most popular.
- **Data Structure:** Use of views and logs indicates organized data management.

6. Conclusion

This project demonstrates how SQL can be used to analyze real-world datasets and uncover valuable insights. By performing data cleaning and querying, we identified trends in Netflix content that reflect audience demand and platform growth.

7. Tools Used

- MySQL
- Kaggle Dataset
